Raw data
Cityscapes fine
5,000 frames, 1024x2048
Preprocessing
resize 512x1024, label
remap to 19 + ignore
Data loader
random 512 crop, flip,
ImageNet normalization
Model
U-Net | DeepLabV3
3x512x512 -> 19x512x512
train
Loss
cross-entropy or Dice
ignore_index=255
per batch
Optimization
AdamW 3e-4, cosine
over 40 epochs
Prediction
argmax over classes
per pixel
Post-processing
none: logits are already
at input resolution
Evaluation
mIoU, Dice, per-class IoU
latency, peak memory
Checkpoint
highest validation mIoU,
patience 8
Reporting
3 seeds per arm, mean +/- 1 sd, decision rule;
test split read once after selection
per epoch, on validation
